

Equipping healthcare workers with the tools they need to thrive.

The pandemic exposed major pressure points for the healthcare sector, with both frontline and back of house workers grappling with poor flexibility, long hours and under-resourced teams. But with the right devices and software, there's an opportunity to fix those pain points, to say hello to stability.

61% of healthcare workers want to continue using technology as part of their work¹

Surface Devices, integrated with Microsoft's Cloud for Healthcare software, simplify and enhance delivery of care for all involved.

On-site Clinicians

Successful care delivery demands efficient, personalised experiences with empowered staff. The right digital tools can speed up care and reduce the strain on workers, improving experiences for everyone and making care more accessible.

- Surface devices, such as Surface Go, are consistent, deeply integrated and easy-to-use
 - Faster, more secure log-ins with biometrics and NFC-enabled badge access
 - Convenient, fast charging stations so there's always a device ready to go
- Practical accessories such as mobile cart, robust cases and Surface Pen
- Easy to sanitise
- Choice of input options including digital ink with Surface Pen make the devices natural and inclusive to use, even in the most challenging care situations (e.g. hands-free to work on a patient)

Mobile and Remote care

As care is increasingly oriented around patients, the need for tools to support better mobile and remote care is clear. For those carers travelling between sites, or meeting patients in homes and communities, the Surface Go is the ideal

way to stay connected and productive. And for specialists who can't always be in the room with patients, premium devices such as Surface Pro X or Surface Pro bring patients and care teams closer, increasing quality and speed of care.

- Lightweight, ultra-mobile devices with flexible form factors
- Surface Go delivers great value performance for community carers, while Surface Pro X delivers a premium experience for on-the-go consultants
- Surface Hub brings disparate care teams together to collaborate on care delivery
- Secure, real-time connection to work data and systems from anywhere, with biometric access and in-built LTE connectivity
- Microsoft Teams integration enables seamless collaboration and supports better care during decision-making processes
- Long-lasting batteries, robust cases and easy sanitisation that go the distance with you

Administrators

Adaptations in working practices over the past couple of years have uncovered a desire among workers in healthcare for greater flexibility from hybrid working.

Enabling that in a complex sector such as healthcare is challenging, but Microsoft's solutions and expertise can help:

- Unified, familiar user experiences, which means less need for relearning
- Comprehensive range of devices, from value Surface Laptop Go to advanced Surface Laptop Studio to meet the needs of all users
- Chip to cloud security providing ultimate control, proactive protection, and peace of mind wherever and however work gets done
- Secure devices, in addition to remote deployment and management with Autopilot and In Tune
- Deep integration with Cloud for Healthcare, improving accessibility for all users

How can we help?

Computacenter and Microsoft will help make digital work for your organisation.

Clinicians will be empowered to make faster and better decisions that improve healthcare quality and patient safety.

And healthcare leaders will be empowered to maximise the capacity of existing clinical teams while safeguarding their wellbeing.
